Our society is struggling with what Pope Benedict has called "profound crisis of faith that has affected many people." In response, the Holy Father has called us all to a Year of Faith from October 2012 to November 2013. We see the signs all around us: the demand for science to prove everything before we can believe it, the role of media and celebrities who deny the existence of God and denounce the role of the Church, and the ease in which we can all isolate God and faith into only one part of our life. In a follow-up to his best selling *St. Paul Bible Study* for Catholics during the year of St. Paul, Fr. Mitch Pacwa once again leads Catholics to a deeper understanding of Pope Benedict's call to action for the year. Perfect for individual or group study, this book is a wonderful guide to experiencing a conversion, growing in faith, and following Jesus Christ more closely. It shows us how to integrate every component of our life - relationships, morality, work, recreation, and all - into a meaningful whole. Make the most of Pope Benedict's Year of Faith, walking hand in hand with Fr. Pacwa as he guides you through the beauty and insights of Scripture in relationship to your everyday life.

Philip Brophy's bfi Screen Guide provides a soundmap to a hundred films that engage the ears. Covering titles as diverse as Car Wash and Apocalypse Now, Le Samourai and Stalker, Shaft and Citizen Kane each entry outlines the film's distinctive contribution to the hitherto underexplored world of sound in cinema. The author guides the reader through an alternative cinema canon of the 'ear' of sonically exciting and remarkable films from all across the world and their amazing diversity of purpose and effect. This guide shows how most critics completely underestimate the significance of sound and how it is caught between the two irreconcilable forces of the 'sound track' and sound design. In his introduction and analysis (or more accurately 'hearing') of 100 films, the author compels the reader to 'listen not look' and to 'think with their ears'. 100 Film Scores and Sound Design is a provocative and absorbing guide to some of the most exciting uses of sound in popular and international cinema.

As in the days following Skylab, solar physics came to the end of an era when the Solar Maximum Mission re-entered the earth's atmosphere in December 1989. The 1980s had been a pioneering decade not only in space- and ground-based studies of the solar atmosphere (Solar Maximum Mission, Hinotori, VLA, Big Bear, Nancay, etc.) but also in solar-terrestrial relations (ISEE, AMPTE), and solar interior neutrino and helioseismology studies. The pace of development in related areas of theory (nuclear, atomic, MHD, beam-plasma) has been equally impressive. All of these raised tantalizing further questions about the structure and dynamics of the Sun as the prototypical and best observed star. This Advanced Study Institute was timed at a pivotal point between that decade and the realisation of Yohkoh, Ulysses, SOHO, GRANAT, Coronas, and new ground-based optical facilities such as LEST and GONG, so as to teach and inspire the up and coming young solar researchers of the 1990s. The topics, lecturers, and students were all chosen with this goal in mind, and the result seems to have been highly successful by all reports.
